

Advanced Web Technologies Course

Book Finder

1st Semester 1440-1441 H

Project Detailed Description:

1) Project Goal:

The purpose of the website is to develop a Book search application that enables the user to search books from Google Books based on a keyword from the book title and retrieves the relevant books using Google Books API.

The Book Finder uses AJAX technology to search and retrieve the books from a JSON file that is acquired using the Google Books API. Then the page will display the retrieved books to the user.

2) Programming language:

HTML, CSS, JavaScript (Ajax, JSON).

3) Tools:

Software tools: Notepad++

4) Application Type:

Website.
